

IN THE CLAIMS:

Please amend claims 89, 101 and 102 as indicated below. This listing of claims will replace all prior versions, and listings, of claims in the present application:

72. (Previously presented) A method comprising:

receiving at a wireless client device a network resource over a wireless link used for wireless telephony;

receiving at the wireless client device a user input applied at a user interface of the wireless client device;

generating a request at the wireless client device in response to the user input, the request including an identifier of the network resource; and

sending the request to a remote server via the wireless link to cause a set of bookmarks stored in the remote server and associated with the wireless client device to be updated based on the request, each of the stored bookmarks representing a network resource, the set of stored bookmarks being accessible to the wireless client device via the wireless network to enable a user of the wireless client device to select any of the stored bookmarks to generate a request for a corresponding network resource, wherein the wireless client device does not have to store any data representing any of the bookmarks to request and receive the set of bookmarks.

73. (Previously presented) A method as recited in claim 72, wherein the bookmarks are Uniform Resource Locators (URLs).

74. (Previously presented) A method as recited in claim 72, wherein the identifier is appended to a network locator of the remote server in the request.

75. (Previously presented) A method as recited in claim 72, wherein at least one of the stored bookmarks has been previously added to the set of stored bookmarks by a user of the wireless client device.

76. (Previously presented) A method as recited in claim 72, wherein the request comprises an add request to cause the set of stored bookmarks to be updated by adding a bookmark to the set of stored bookmarks.

77. (Previously presented) A method as recited in claim 72, wherein the request comprises a delete request to cause the set of stored bookmarks to be updated by deleting a bookmark from the set of stored bookmarks.

78. (Previously presented) A method as recited in claim 72, further comprising including in the request a state variable used by the wireless client device.

79. (Previously presented) A method as recited in claim 78, wherein the state variable represents user input received at the wireless client device.

80. (Previously presented) A method comprising:

sending a request, from a wireless client device over a wireless link used for wireless telephony, for a set of identifiers stored in a remote server, each of the identifiers representing a network resource and being associated with the wireless client device in the remote server, wherein the wireless client device does not have to store any data representing any of the identifiers to request and receive any of the identifiers; and

receiving at the wireless client device at least one of the requested identifiers via the wireless link in response to the request.

81. (Previously presented) A method as recited in claim 80, wherein the set of identifiers comprises a plurality of Uniform Resource Locators (URLs).

82. (Previously presented) A method as recited in claim 80, wherein the request for the set of identifiers comprises a network locator of the remote server and an argument for use in locating the set of identifiers appended to the network locator of the remote server.

83. (Previously presented) A method as recited in claim 80, wherein at least one of the stored identifiers has been previously added to the set of stored identifiers in response to a request from the wireless client device.

84. (Previously presented) A method as recited in claim 80, further comprising:

receiving at the wireless client device a network resource over the wireless link, the network resource having an identifier;

receiving at the wireless client device a second user input applied at a user interface of the wireless client device;

generating a second request at the wireless client device in response to the second user input, the second request including the identifier; and

sending the second request to the remote server via the wireless link to cause the set of stored identifiers to be updated based on the request.

85. (Previously presented) A method as recited in claim 84, wherein the request comprises an add request to cause the set of stored identifiers to be updated by adding the identifier to the set of stored identifiers.

86. (Previously presented) A method as recited in claim 84, wherein the request comprises a delete request to cause the set of stored identifiers to be updated by deleting the identifier from the set of stored identifiers.

87. (Previously presented) A method comprising:

storing in a server system a set of resource locators associated with a wireless client device, the set of resource locators being accessible to the wireless client device via a wireless link used for wireless telephony, to enable a user of the wireless client device to select any of the stored resource locators to generate a request for a corresponding network resource, wherein the wireless client device does not have to store any data representing any of the resource locators to request the set of resource locators;

receiving, at the server system from the wireless client device via the wireless link, a request to update the set of stored resource locators, the request including a resource locator of a network resource accessed by the wireless client device; and

updating the set of stored resource locators based on the request.

88. (Previously presented) A method as recited in claim 87, wherein the resource locator comprises a Uniform Resource Locator (URL).

89. (Currently amended) A method as recited in claim 87, wherein the resource locator is appended to a network resource locator of the ~~remote server~~ system in the request.

90. (Previously presented) A method as recited in claim 87, wherein at least one of the stored resource locators has been previously added to the set of stored resource locators by a user of the wireless client device.

91. (Previously presented) A method as recited in claim 87, wherein the request comprises an add request to cause the set of stored resource locators to be updated by adding the resource locator to the set of stored resource locators.

92. (Previously presented) A method as recited in claim 87, wherein the request comprises a delete request to cause the set of stored resource locators to be updated by deleting the resource locator from the set of stored resource locators.

93. (Previously presented) A method as recited in claim 87, wherein the request comprises a state variable used by the wireless client device.

94. (Previously presented) A method as recited in claim 93, wherein the state variable represents user input received at the wireless client device.

95. (Previously presented) A method comprising:

storing in a server system a set of resource locators associated with a wireless client device, the set of resource locators being accessible to the wireless client device via a wireless used for wireless telephony, to enable a user of the wireless client device

to select any of the stored resource locators to initiate a request for a corresponding network resource;

receiving at the server system a request for at least one of the resource locators from the wireless client device via the wireless link, wherein the wireless client device does not have to store any data representing any of the resource locators to request the set of resource locators; and

sending a requested resource locator to the wireless client device via the wireless link in response to the request.

96. (Previously presented) A method as recited in claim 95, wherein the set of resource locators comprises a plurality of Uniform Resource Locators (URLs).

97. (Previously presented) A method as recited in claim 95, wherein at least one of the stored resource locators has been previously added to the set of stored resource locators by a user of the wireless client device.

98. (Previously presented) A method as recited in claim 95, further comprising:

receiving at the server system a second request from the wireless client device via the wireless link, the second request including an identifier of a network resource accessed by the wireless client device; and

updating the set of stored resource locators based on the second request.

99. (Previously presented) A method as recited in claim 98, wherein the second request comprises an add request to cause the set of stored resource locators to be updated by adding the identifier to the set of stored resource locators.

100. (Previously presented) A method as recited in claim 98, wherein the second request comprises a delete request to cause the set of stored resource locators to be updated by deleting the identifier from the set of stored resource locators.

101. (Currently amended) A method as recited in claim 95, further comprising, prior to said receiving at the server system a request from the wireless client device:

receiving a request at the ~~remote server~~ system for a set of identifiers representing at least part of the set of stored resource locators from the wireless client device; and

sending the set of identifiers to the wireless client device via the wireless link.

102. (Currently amended) A method as recited in claim 101, wherein the request for the set of identifiers comprises a network locator of the ~~remote server~~ system and an argument for use in locating the set of identifiers appended to the network locator of the remote server.
